Description			
<p>When a package has not already been voided, there should be a "void now" link in the "When Voided:" field. This already appears in "edit" mode; it just needs to appear when not editing (and possibly should not appear in edit mode as this could lead to accidental loss of entered data).</p> <p>There could also be an "un-void" link if the package <i>has</i> been voided, but that's less important.</p> <p>example package</p>
